1. Anatomy of the Digestive System

Understanding the major organs involved?mouth, esophagus, stomach, small intestine, large intestine, liver, pancreas, and gallbladder?is fundamental. Questions may ask about the roles of these organs or their positions in the digestive tract.

2. Digestive Processes

This area covers mechanical and chemical digestion, including mastication (chewing), enzyme secretion, peristalsis, and nutrient absorption mechanisms.

3. Enzymes and Secretions

Many tests focus on enzymes like amylase, pepsin, and lipase, asking what substrates they act upon and in which organs they are active.

4. Nutrient Absorption and Transport

Questions might explore how carbohydrates, proteins, fats, vitamins, and minerals are absorbed and transported through the body.

5. Common Disorders and Diseases

Some tests include questions about conditions such as acid re?ux, ulcers, Crohn?s disease, or lactose intolerance to assess understanding of digestive health.

Explanation: The small intestine has a highly folded lining with villi and microvilli that dramatically increase surface area, making it the main site for nutrient absorption.

What enzyme breaks down proteins in the stomach?

a) Amylase

b) Lipase

c) Pepsin

d) Maltase

Answer: c) Pepsin

Explanation: Pepsin is secreted by the stomach lining and starts the digestion of

proteins into smaller peptides.

Which part of the digestive system connects the mouth to the stomach?

a) Esophagus

b) Trachea

c) Duodenum

d) Pharynx

Answer: a) Esophagus

Explanation: The esophagus is a muscular tube that transports food from the mouth

to the stomach via peristaltic movements.

Where is bile produced?

a) Gallbladder

b) Pancreas

c) Liver

d) Stomach
