Overview of DIN ISO 8667

What is DIN ISO 8667?

DIN ISO 8667 is an international standard developed jointly by the Deutsches Institut für Normung (DIN) and the International Organization for Standardization (ISO). It establishes the minimum requirements for the design and fabrication of dished ends, which are semi-spherical or hemispherical shells attached to pressure vessels and tanks.

Purpose and Scope

The main purpose of DIN ISO 8667 is to ensure that dished ends are manufactured with consistent quality and safety features. It covers:

- Geometrical specifications
- Material requirements
- Manufacturing processes
- Testing and inspection procedures

The standard applies to dished ends used in pressure equipment operating under specified pressure and temperature conditions, primarily within the scope of the European and international

markets.

Types of Dished Ends Covered by DIN ISO 8667

Classification of Dished Ends

DIN ISO 8667 classifies dished ends based on their shape and manufacturing process. The main types include:

- Hemispherical Ends
- Elliptical Ends
- Flanged Ends
- Torispherical (or Spheroidal) Ends

Each type serves specific applications depending on pressure, volume, and design considerations.

Hemispherical Ends

- Most commonly used due to their strength and ability to withstand high pressure
- Have a spherical shape, offering uniform stress distribution
- Suitable for large diameters and high-pressure applications

Elliptical Ends

- Shaped like an elongated sphere
- Used where space constraints or specific design requirements exist
- Less expensive than hemispherical but less capable of handling very high pressures

Flanged Ends

- Feature a flange for easy attachment and disassembly
- Commonly used in piping systems and smaller vessels
- Allow for easy inspection, maintenance, and replacement

Torispherical (Spheroidal) Ends

- Combine features of hemispherical and elliptical ends
- Have a toroidal (doughnut-shaped) crown with a knuckle radius
- Offer a balance between manufacturing complexity and strength

Design and Material Requirements

Design Principles According to DIN ISO 8667

The standard emphasizes the importance of:

- Stress analysis: Ensuring that dished ends can withstand internal or external pressure without failure

- Post-weld heat treatment may be required to relieve stresses

Surface Finishing

- Surfaces should be smooth and free from defects
- Surface treatments may include polishing, coating, or passivation depending on the application

Testing and Inspection Procedures

Non-Destructive Testing (NDT)

DIN ISO 8667 mandates various NDT methods to verify the integrity of dished ends, such as:

- Radiographic testing
- Ultrasonic testing
- Magnetic particle inspection
- Dye penetrant testing

Hydrostatic and Pneumatic Tests

- Hydrostatic testing involves filling the dished end with water and pressurizing it beyond operating pressure to check for leaks or deformations
- Pneumatic testing uses air or inert gases under pressure, with strict safety precautions

Dimensional Inspection

- Ensures conformity to geometric specifications
- Includes measurements of radius, thickness, and flange dimensions

Marking, Certification, and Documentation

Marking Requirements

According to DIN ISO 8667, dished ends must be marked with:

- Manufacturer?s identification
- Material designation
- Diameter and thickness
- Production date and batch number
- Compliance statement with the standard
